Report of Calibration

Model: 5628	Description: Platinum Resistance Thermometer	Customer: FLUKE SOUTH EAST ASIA PTE LTD SINGAPORE SG	
Serial No.: 4413	Manufacturer: Fluke Calibration		
As Found Condition: New	As Left Condition: Calibrated	Calibration Model: 1913-4-7	Calibration Instruction: AFC105 Revision 001

The above referenced Platinum Resistance Thermometer (PRT) was calibrated by a combination of fixed point and comparison methods over the temperature range(s) specified. The calibration methods used are based on recent publications pertaining to the ITS-90 as it applies to secondary PRT calibrations.

For temperatures above 0°C, this calibration was performed at the appropriate fixed points required for the ITS-90 temperature range identified in the "Calibration Model" location above. For temperatures below 0°C (if applicable), the calibration was performed by comparison against a calibrated SPRT. When the temperature range warrants and additional temperature points are available, measurements at supplementary temperatures are included to improve the quality of the calibration result. The calibration measurements were performed using a digital DC readout and DC reference resistors at one level of excitation current. The value of current used is shown in the calibration data section of this report.

During the course of calibration, the PRT resistance at the triple point of water (RTPW) is measured several times to provide the required calibration data and to verify the stability of the PRT. Additionally, the PRT is annealed after the first RTPW measurement to precondition it for calibration. The initial RTPW measurement shows the "As Found" condition of the PRT and the subsequent RTPW measurements (after annealing) indicate the stability of the PRT during calibration. The procedure places a limit on the amount of change permitted in the RTPW during calibration. Instruments that exceed this value will be given larger uncertainties commensurate with the observed performance and the "As Left" condition will be denoted as "Limited". The "As Found" RTPW, the dRTPW during calibration, the dRTPW limit, and the final RTPW are shown in the calibration data section of this report.

The following reference standards and measurement equipment were used in this calibration.

Instrument	Model	Serial No.	Recall Date
SPRT, Glass Sheath	5683	4360	02/04/2022
Precision Digital Thermometer	1595A	B0C034	12/14/2019
Precision Digital Thermometer	1595A	B27094	09/14/2019
Precision Digital Thermometer	1595A	B08031	09/21/2019

Environmental Conditions:

Temperature: 23.52°C

Humidity: 40.1% RH

Calibration Date: 04/08/2019

Calibration Due: Not Defined

PO Number: 17514/SG//STOCK

Report Number: B9430036

Report of Calibration

The PRT was calibrated at the following temperatures with the associated uncertainties. The uncertainty evaluation accounts for all known uncertainties present at the time of calibration including long-term behavior of the calibration system, measurement noise, and any short-term effects of the PRT. The uncertainties are reported at the calibration temperatures only. The uncertainties at intermediate temperatures can be computed from these values and the ITS-90 propagation of error curves. The uncertainties are reported at a coverage factor of 2 ($k=2$).

CALIBRATION POINT (point °C)	TEMPERATURE t90(°C)	MEASURED RESISTANCE	UNCERTAINTY (mK)
-197.000	-197.000	4.66922	±6.0
-80.000	-80.000	17.29642	±6.0
-38.834	-38.834	21.57297	±6.0
0.010	0.010	25.55609	±4.0
In	156.599	41.13899	±6.0
Sn	231.928	48.37066	±7.0
Zn	419.527	65.64802	±9.0
Al	660.323	86.27111	±14.0

The following tables indicate the "As Found" RTPW nominal current, the dRTPW in mK, and dRTPW limit in mK. The dRTPW is the change in RTPW during the calibration, not the difference between the "As Found" and "As Left" RTPW. The value of current used in the calibration was 1.000 mA.

As Found Rtpw	dRtpw Observed	dRtpw Limit
1 mA 25.55616	2 mK	3 mK

The following values were determined for the RTPW and the coefficients of the pertinent deviation functions of the ITS-90. For best results, the RTPW value shown should be used as a baseline value for determining the stability of the PRT. The user should maintain a record of RTPW values measured as a routine operation and use these values when computing temperature.

Results for Nominal Current Calibration

$$\begin{aligned}
 \text{RTPW} &= 25.55609 \quad \Omega \\
 a4 &= -2.685632 \times 10^{-5} \\
 b4 &= -7.960788 \times 10^{-7} \\
 a7 &= -9.225664 \times 10^{-5} \\
 b7 &= 2.295581 \times 10^{-5} \\
 c7 &= -1.219894 \times 10^{-5}
 \end{aligned}$$

The attached interpolation table was generated from the coefficients listed above. The table is given in terms of resistance (Rt90) versus temperature (°C) at the nominal current. These tables can be used in cases where the readout instrument does not have the capability of computing temperature directly from the coefficients or as a check that the coefficients have been entered into the readout or computer program correctly. The following steps are used to compute temperature from measured resistances utilizing the table. (1) Determine the resistance at the temperature in question. (2) On the table, locate the two resistance values which surround the measured resistance. (3) Subtract the lower of the two from the measured resistance. (4) Divide the result by the sensitivity (dR/dt) from the adjacent column. (5) Add the product of this computation to the temperature which corresponds to the resistance value used in step (3). The additional uncertainty in the tabulated values is negligible (<=0.01mK) but when these tables are used, an additional uncertainty of approximately 0.1 mK should be assumed as a result of the required linear interpolation operation outlined above.

This calibration is traceable to the International System of Units (SI) through recognized national metrology institutes (NIST, NRC, PTB, NPL, etc.), ratiometric techniques, or natural physical constants and is in compliance with ISO/IEC 17025:2005. Calibration certificates without identification of the authorizing person are not valid. This certificate applies to only the item identified and shall not be reproduced except in full, without the specific written approval by Fluke Corporation. It shall not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. Calibration reports without signatures are not valid.

Certificate of Calibration
Fluke Calibration, American Fork
Primary Temperature Laboratory

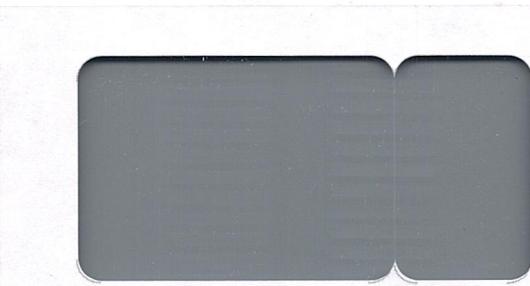

Description:	Readout, Digital Thermometer	Certificate Number:	B9301060
Manufacturer:	Fluke	Date of Calibration:	28 Feb 2019
Model:	1524	Date Due:	
Serial Number:	3491923	Temperature:	21.0 to 25.0 °C
Status:	As-Found: New	Relative Humidity:	20 to 60 %RH
	As-Left: In Tolerance	Pressure:	83.5 to 88.5 kPa
Calibration:	Full	Issue Date:	01 Mar 2019
Procedure:	AFC208 - 1		
Customer:	FLUKE SOUTH EAST ASIA PTE LTD SINGAPORE, SG		
PO Number:	17291/SG//STOCK		

This calibration is traceable to the SI through recognized national measurement institutes, ratiometric techniques, or natural physical constants and is in compliance with ISO17025:2005 and ANSI/NCSL Z540.1. The calibration has been completed in accordance with the Fluke Calibration Quality System document QSD 111.0. Calibration certificates without signatures are not valid. This certificate applies to only the item identified and shall not be reproduced other than in full, without the specific written approval by Fluke Corporation. This certificate shall not be used to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

This calibration certificate may contain data that is not covered by the Scope of Accreditation. The unaccredited test points, where applicable, are indicated by an asterisk (*), or confined to clearly marked sections. Functional tests are not accredited.

Measurement uncertainties at the time of test are given where applicable. They are calculated in accordance with the method described in the ISO Guide to the Expression of Uncertainty in Measurement. The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor *k* such that the coverage probability corresponds to approximately 95 %.

Quality Manuals

This calibration has been completed in accordance with:

The Fluke Corporate Quality Manual, QSD 111.00, Revision 122, Dated June, 2018 and/or

The Fluke 17025 Quality Manual, QSD 111.41, Revision 005, Dated Sept. 2014

The instrument described herein was calibrated by two methods. Resistance functions were calibrated by direct measurement of laboratory reference resistors. Thermocouple functions were calibrated by direct measurement of laboratory mV references. The internal reference junction compensation is a resistance function and was calibrated as described above for resistance functions. The calibration data, internal calibration constants, and calibration uncertainties are shown on the following page(s) of this report. The calibration uncertainties are shown at a coverage factor of 2 ($k=2$). All known significant sources of uncertainty have been considered. Any limitations or remarks pertaining to this instrument and/or calibration are shown below. Additionally, out of tolerance indications, if any, are identified along with the corresponding data on the data pages of this report.

Calibration uncertainties have been taken into account in the determination of tolerance status using risk analysis algorithms. When using the instrument in a calibration process, it is recommended that the instrument specifications be used as the contribution of the instrument rather than the calibration uncertainties. The instrument tolerances are shown on the report at a confidence interval of 95%.
